

COURSE REGISTRATION SYSTEM

NAME OF THE WEBSITE: **COURSE REGISTRATION**

Description of the Website:

I have designed the website which is a course registration like our university UTD has.

The page starts from **Welcome.html**. This is the home page.

My website gives various features:

- User can register themselves to register for the courses.
- After logging in ,user can see the courses available.
- User can search and filter the courses. Search option is available to search for the courses and user can also select from the dropdown based on various filters like school, department, courses etc.
- Users can also see the history of the courses they have registered for.
- My website also provides admin access and admin can be created.
- Admin can perform various operations like he can create a user , register for the courses ,can see history of the courses and can also update the tables which are required for various operations.
- There are some validation restrictions which need to be considered while user register or login.
- User can also add/drop the courses according to their choice.
- The details for admin page-Username-prakshita123 and Password-Praks@1234.

Assumptions

- User cannot register for the course already he has been enrolled in.
- User can register for the courses currently available.
- One Course can be taught by multiple professors in the same semester.

DATABASE FOR THE WEBSITE:

```
CREATE DATABASE IF NOT EXISTS `course_register` DEFAULT CHARACTER SET latin1  
COLLATE latin1_swedish_ci;  
USE `course_register`;
```

```

DROP TABLE IF EXISTS `data_cart`;
